

KEYSCAN

Keyscan's access control units are Flexible, Efficient, and have Unlimited Expandability. Their Access Control Units adapt to countless configurations and incorporate enhanced circuit board components for superior operating efficiency. And, they can be structured to give you an unlimited number of sites and cards in your access control system.

Compatible with proximity, bar code, magnetic stripe, biometric, and radio frequency technologies, all Keyscan door and elevator access control units include the following features for convenience, dependability, and long-lasting performance.

- Heavy-duty 10 amp relays for long life and reliability
- Large, well constructed enclosure with ample room for wiring and circuit boards
- Dual processors for enhanced system performance
- Removable terminal blocks for easier installation and service
- 2 year warranty

A choice of three Access Control Systems are available:

CA 200 Access Control Unit

- Supports any combination of 2 readers or keypads
- 8 alarm inputs to monitor auxiliary input points
- 4 time-programmable outputs

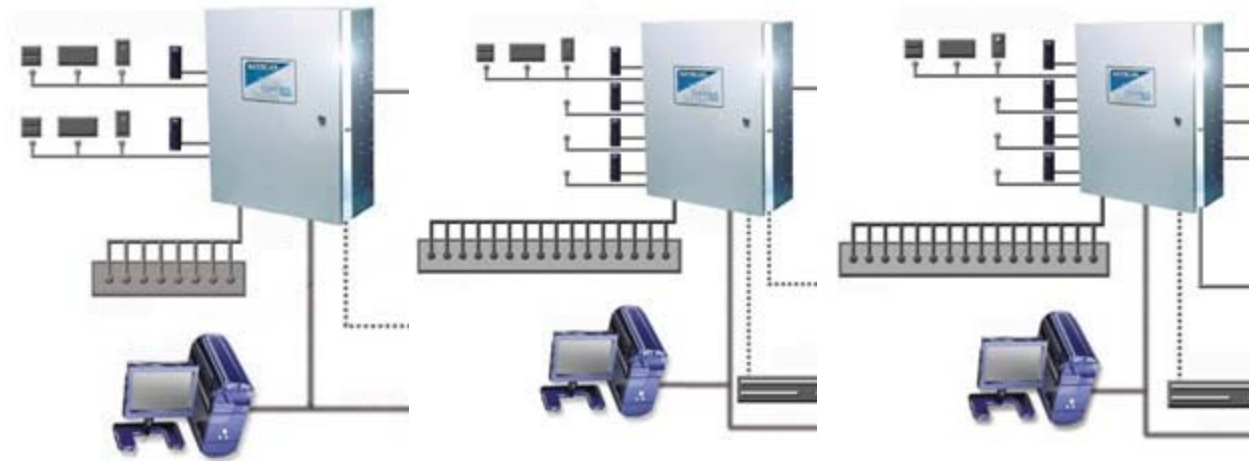

CA 4000 Access Control Unit

- Supports any combination of 4 readers or keypads
- 16 alarm inputs to monitor auxiliary input points
- 4 time-programmable outputs with the option of increasing to 12 outputs
- Separate power supply input for proximity readers
- Optional 32 or 64 programmable supervised input points

CA 8000 Access Control Unit

- Supports any combination of 8 readers or keypads
- 16 alarm inputs to monitor auxiliary input points
- 8 time-programmable outputs expandable to 16
- Separate power supply input for proximity readers
- Optional 32 or 64 programmable supervised input points

Management Software

Keyscan Management System V

Keyscan Management System V uses an understandable and intuitive design so that even if you've never seen an access control system before, it won't take long before you're comfortable setting up and operating our access control systems.

From logically organized pull down menus and on-screen quick buttons for frequently used tasks, you can easily locate system functions. The alarm notification feature and the alarm events panel keep you instantly informed of alarm conditions. Even set the system to E-mail alarms or critical messages to a cell phone or other Internet connected device. And System V offers a wealth of management report tools and utilities. So, whether your requirements are basic or complex, take charge with Keyscan Management System V.

Keyscan Management System V is available in a Standard Package with four add-on options so that you only pay for features you need. Should your requirements change, you can easily add any of the other optional packages.
