

### **M-100FX 10-Channel AudioMixer with Effects**

The M-100FX is a 10-channel Audio mixer with a number of useful Voice & Sound Processing effects. The M-100FX is designed to primarily target the video editing market with such features as direct USB connection to computer, voice effects suited for voice-overs, and a variety of input types, including XLR/TRS, 1/4", & RCA inputs. The many inputs allow the video editor to record from most any source straight into the computer without the added noise common with most internal sound cards. The M-100FX also has phantom power for use with high-end condenser microphones more suited to narration. Although the M-100FX is clearly targeting the video market, the particular tool set will fit most any small computer-based audio studio.

Main Features Include:

10 Analog Input Channels, Variety of inputs including; XLR/TRS" & RCA inputs, Voice & Sound Processing Effects ideal for Video Editing, Digital out in both Coax & Optical, Noise-free audio recording to the computer through USB inter
