

### **PR-80 Dual Stream Realtime DV Presenter and Editor**

The system supports play back and switch high-quality DV-format video images in real time as well as a variety of Realtime Effects. Up to 4 types of realtime video effects like mirroring, colorize, posterise, etc... can be used simultaneously. Including switching effects for smooth transitions between video images, control of playback speed, resetting of retrigger points, and more.

Use the V-LINK function to exhibit video during musical performances, create virtual clips of live video sources with the V-4 (video mixer) control, use the Presenter Control for simple and easy coordination of multiple PR-80s and DV-7PRs, and more.

A variety of External Control Functions gives you the preference of using the keyboard and mouse, the RS-232C port, optional touch screen, or the optional DV-7DL Controller, and more. In addition, import and export DV clips and user-define masks via LAN.

The system lets you play back two pieces of video at the same time - cross dissolve, mix or even key one over the other (luminance and chroma keys are supported).

Use the Scheduler to have the PR-80 automatically perform a variety of functions, such as playing back data, stopping, synchronizing times over a network, or starting up at a predetermined time.
